A20 Flange Code Identification

The A20 PTO has a new 30 position, rotatable, output flange. In addition to Muncie Power's standard default flange positions, the flange may be ordered in a custom position to accommodate virtually any required pump orientation. These positions can be identified by a code that is shown on the output flange and PTO cover.

To identify what code is necessary, line up the letter on the flange with a set of dots on the PTO cover. The letter will be centered over the dots. the code will be a letter, followed by the number of dots. This code can then be added to the end of the A20 model code for future orders, and the PTO will ship with the flange in the same position. See the examples shown in Figures 1-3 for details. The flange may also be shipped loose by adding an XX to the end of the A20 PTO model code.
